As we understand that the eProject is a step-by- step learning environment that closely simulates the class-room and Lab based learning environment into actual implementation. It is a projectimplementation at your fingertips!! An electronic, live juncture on the machine that allows you to.

- ✓ Practice step by step i.e. laddered approach.
- ✓ Build a larger more robust application.
- ✓ Usage of certain utilities in applications designed by user.
- ✓ Single program to unified code leading to a complete application.
- ✓ Learn implementation of concepts in a phased manner.
- ✓ Enhance skills and add value.
- ✓ Work on real life projects.
- ✓ Give a real life scenario and help to create applications more complicated and useful.
- ✓ Mentoring through email support.

We would like to send a great thank to our professor and others student for the addorable supports during the time in project.

Beside serveral mistakes we had made in the project, we hope to have more oppotunities to widen our knownledge in web developing world.

We also thank you so much for your infomation and the “demo” project from India APTECH to help us get more reality experience in this project. Since we have gained more experience from this project, we will not stop learning any thing as much as we can to be more successful in the future.

Your Sincerely,

Team Group 06.

Synposis

The Objective of this program we aim is to give a sample project to work on real life projects. These applications help us build a larger more robust application.

The objective is not to teach us HTML/JavaScript but to provide us with a real life scenario and help us create basic applications using the tools.

Hence, we can revise the chapters before we start with the project.

This project is meant for students like us who have completed the module of HTML5. These programs should be done in the Lab sessions with assistance of the faculty if required.

The website (in this project) is a tool that makes planning your wedding easier, saving lots of time and money….

It is very essential for us that will have a clear understanding of the subject. We think we should go through the project and solve the assignments as per requirements given.

And get back ***eprojects@aptech.ac.in*** as the assigned schedule.

Problem Definition

+WHAT IS A WEDDING PLANNER?

Understood in the simplest way Wedding Planner is the person who plans and organizes the wedding. Wedding Planner is considered as an expert in the field of wedding planning. Wedding Planner will stand out to plan and organize weddings according to the diverse needs of customers.

Problem Statement

A website “wedding planner” needs to be developed. The main objective of developing this site is to create a static website for the wedding planner, from which user can get the details of the wedding such as about wedding planner, venue, theme, contact details, address, images etc. Any dynamic type of database operations need not be included in the website.

Requirement Specification:

The Web site is to be created based on the following requirements.

1. Home page: It contains basic information about the wedding planner system.

2. About page: It contains all about the wedding planner system information and their working.

3. Gallery page: This page contains all the related images of venue, general decoration, themed decoration, dinning arrangements etc

4. Register page: Here user can easily register on the website and confirmation message will be displayed after registering.

5. Contact page: user can submit their contact details

6. Login: user can login with credentials and check the related information.

7. Forgot password: user can retrieve the password.

8. The Home Page should be created with proper sections, graphics and with a suitable logo.

9. There should be a “Contact Us” page which will have the Address of the Company with location should be displayed using GeoLocation API (eg. GoogleMaps) and the mail address which when clicked will invoke the local mail client from where they can send an email.

Customer Requirements Specifications

User:

Input:

- Member registration data.
- Wedding service information to choose.
- Feedback / Suggestions for admin

Process:

- Check out member registration information.
- Check out the feedback / suggestion.
- Search for the wedding services.
- Search for the providers.
- Check the number of attendees.

Output:

- Notification of successful or failed member registration.
- Notification of successful or failed feedback / suggestion.
- Services information.
- Provider information.

Webmaster:

Input:

- Admin login information.
- Service information needs to be added, changed, deleted.
- Provider information needs to be added, changed, deleted.
- Price information needs to be added, changed, deleted.
- Member information needs to be deleted.
- Respond to customer feedback/suggestion.

Process:

- Add / change / delete prices.
- Add / change / delete provider.
- Add / change / delete service.
- Delete member.
- Check feedback information.
- Delete feedback.

Output:

- Notification of successful or failed login.

- Notification of successful or failed add / change / delete providers.
- Notification of successful or failed add / change / delete prices.
- Notification of successful or failed add / change / delete services.

Hardware / software requirement:

Software:

- A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better
- 64 Megabytes of RAM or better

Hardware:

- Notepad/HTML editor
- Dreamweaver
- IE 5.0/ Netscape 6.0
